Choose the endless experiences! Choose the MUGENRACE!

# **ROAD TO INFINITY**

Biking is like tasting freedom. Being hugged by the wind, being pulled in the corner and seeing the road running backwards under the wheels are all promising something: somewhere, in the front infinity is waiting. Limitless experience, liberating feeling which you need to experience.

Mugen means infinity in Japanese. In the country of the rising sun - where the experience of biking is jointly provided by manufacturing precision and respect for performance - this word is a known surname. If we wish to define the meaning of the word more precisely, we can say: No limit. Infinity.

The owner of MUGENRACE wanted to share this experience with many people when he founded the company in 2001 selling motorbike wear and accessories. To start with, he was selling products of another manufacturers, but he made sure that the sold equipment went through rigorous testing. He knew very well what to check if it came to motorbike gear. As the introducer of stunt riding and successful racer and biker acrobat known from his stunts all over the world, he had plenty of possibilities to experience the strain the biking gear is exposed to during falls at various speed. During the years he tested several products from several manufacturers, when he finally decided: he was going to develop an individual product under an own brand name. His goal was to develop a product, which provides safe protection combined with excellent quality and reliability, also suitable for the MotoGP racers.

# BIKING CLOTHING TEST CRASHING AT A SPEED OF 200 KM/H!

Product dev the right way was of cour multiple cour proved desig and experient to the expecthe dress par security stitue protectors fill When the new the product of leather suit of lored to the se product hims. The evaluation er put the lee was, he che body or it be comfortable step follower road or airpor motorbike. A he let the rop tions. Then he loose, how we the material.

Product development meant new challenges, but finding the right way took more than eight years. The core product was of course the leather suit, which was manufactured in multiple countries and continents based on continuously improved design. By incorporation of the collected knowledge and experience, the enhanced garments got closer and closer to the expectations, in the meanwhile changes were made to the dress patterns, to the leather material and thickness, the security stitching got stronger and the security elements and protectors finally were put at the right place.

When the new version was ready, the company founder tested the product personally. Due to this, the first sample of every leather suit collection was produced in size 48, personally tailored to the size of the founder, as he done the testing of the product himself.

The evaluation of the sample went surprisingly easy. The owner put the leather suit on, he tried how comfortable the suit was, he checked whether it hindered the user in moving its body or it bent well at the elbows or not, he also checked how comfortable it was in riding position. If all was ok, the second step followed. He put on inline skates and on a quiet main road or airport he was being pulled by a high-performance motorbike. At a speed of 200 km/h or sometimes even faster he let the rope go and he was sliding or rolling in various positions. Then he stood up and checked where the stitches came loose, how worn the leather was and were there any splits on the material.

# **REFERENCE INJURIES**

Sok

100

Sokol V bk

terrandvacnc

During testing the sample items were scored higher or lower based on the routine obtained during hundreds of bike crashes. This non-ordinary knowledge is based on the experience of many crashes, involving also several cases with a long-recovery period. The history of crashes includes crashes at minimum speed ending up in coma and a crash with a motorbike with a speed of 300 km/h and ending up with a strained finger. The accidents took place on high-speed race tracks, highways, fields or snow-covered forest tracks while pushing the boundaries, battling time or during the development of acrobatic stunts with the bike. All the learning has been reapplied to the latest development bike wear.

Since the media coverage of Sinja Nakano's crash at a speed of over 300 km/h, nobody contests that bike suits manufactured by using technology enabling top quality, provide real protection to the user. In the headquarters of MUGENRACE the scratches and scars on the damaged suits of the MotoGP, Moto2 and Moto3 racers prove as a peculiar reference, that the suit even at a high-speed crash protected the user.

Power ULTRA

BMW Motorrad

Sophisticated development and uncompromising quality requirements finally reached their goal and after conquering Europe, the MUGENRACE biker wear found its customers also outside Europe. The success is proved by the fact that the brand has entered the highest level possible, the world of MotoGP. More and more racers are wearing the company's suits and the representatives of the company are always present at the races. They are there not only as spectators, but they are also collecting feedback and experience during the races and if required they repair or replace the damaged wear. As of 2018 the company as the partner of Dainese supplies the sponsored teams with leather suits, which according to the latest regulations also include built-in airbags.

The MUGENRACE products are not only manufactured for racers, but for everyone who likes to ride a motorbike. The material of the suits can be cow or buffalo leather, upon extra requirements extremely strong and light kangaroo leather. The product range is continuously expanding, besides the leather products corduroy and jeans materials are also used. Jeans was combined with Kevlar lining, protectors and flexible materials to achieve a true motorbike wear.

Every item of the range is characterised by the trio of quality, design and safety. The MUGENRACE logo displayed on the suit captures the fundamental experience of biking. In the centre of the trademark the infinity symbol, namely the sideways figure of eight was placed. The character was modified during the design phase, the edges were left open indicating that the MUGENRACE products open up the gates towards infinity. From a mathematical symbol such symbol was created, which symbolises infinity. The message is: the road is open, you just need to get on it and go.

...and then
